

Steinberg Extensions Install Guide for n Series

Before you begin, make sure this driver is the correct one for your Yamaha equipment.

If you are using the mLAN Graphic Patchbay with other equipment such as 01X, i88X, mLAN16E (MotifES, S90ES) or MY16mLAN (01V96, 02R96, DM1000, DM2000)

DO NOT update the N series.

You will need the new Cubase 5 extensions for the n Series and Motif XS series if you are using Cubase 5.

Since the n series does not have a separate installer for the extensions, the procedure is different. It is as follows:

You will need to download the Tools for n V2.0.0

[Tools for n V2.0.0 \(Windows Vista/XP 32bit\)](#)

[Tools for n V2.0.0 \(Windows Vista/XP 64bit\)](#)

[Tools for n V2.0.0 \(Mac OS X\)](#)

Windows:

Unzip the download

Find the folder named **Extensions**

Run the setup in the extensions folder only.

Your extensions are now installed in Cubase 5. *If you have a Motif XS or Motif-Rack XS, please go to [Motifator.com](#)*

If you take just a moment to create a profile and list your equipment, You will be shown all the latest update for your Music Production gear.

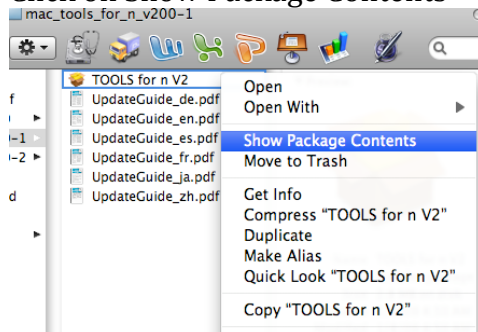

Mac OSX

Unzip the download

Open the mac_tools_n_v200 folder

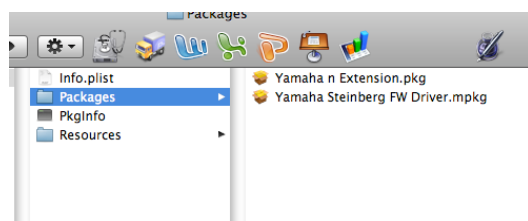

Right click on the installer

Click on Show Package Contents

Open the Packages folder

Launch the Yamaha n Extension.pkg

Done

If you are installing the new YSFW driver, just read the installation guide and follow the instructions in the order that they appear.
